

4/27/70

Dear Dick,

Got your 4/24 note with picture (remarkable time!) plus 22 mailing, inc. 4/20 to Howard, 20, 21 to me.

Between us, we have a few of those thousand flowers blooming on the bullet.

Long, rather remarkable letter from Howard on my complaint about Nichols, etc., which I've acknowledged in a note, because he did take it hard, and will answer in greater detail as soon as possible. More work on Skolnick (very productive) and Ray higher priority right now, and it is extensive in volume.

Your 4/20 to Hoard is reasonable.

Adrenals: my recollection of John's work is that it is excellent. Does administration of these drugs mean Addison's disease? This is the real issue there, isn't it? I have Peters corroboration somewhere from Burkley.

4/20. me. I agree, the discrepancies between the readings of the same X-rays are too great to dismiss anything lightly.

Smith: check. Still seems strange she heard nothing and that no one anticipated this. No medical history, etc. But what he had to live with if he ever thought of it! And understood.*

Wrote TIME. No response. I'm not even convinced he was used by agents. Makes no difference, tho. Meanwhile, I'm working on some angles that, if they can be implemented, might forestall at least some of what impends....Plagiarism much more solidly established than you imagine. He used my documents, with all added, non-Archives marks. And was never in touch with Arch. Fact will not be an issue. You have no idea how solidly I have that, from the top.

4/21 I will send LHO aut report, but I think the cyanosis question, with add Shires (prob the test to which I referred that impressed me) remains a question as I handled it, is this an investigation? I'll rewrite and send n-w copy for your appraisal when I can. How did that blood get out? Heart Massage?

Can't find complete LHO autopsy. Part enc. If you cannot get Belli in library, I'll copy rest and send.

The laways hurry,
